

RTS Mini 2016

Locates your hawk anywhere in the world

Real-Time GPS, GSM, Altimeter and speed sensor, Bluetooth link to App

Try it, you'll like it !!!

MICROSENSORY
CREATING FUTURE

Presenting the new RTS Mini, the only 3 in 1 telemetry set in the world!

Traditional Radio
Transmitter available in all
UHF frequencies.

Telephone, in order to be able
to find back the bird in case
of loss of the radio signal,
sending a GPS location sms
to the user with a Google maps
link to open on the navigator
of the phone.

Real-time GPS through
our full model on our
Receiver and App.

RTS goes for
Radio – Telephone – Satellite.
It is a combined
Radio - Telephone - Satellite
transmitter, **working with
all UHF radio receivers
and in all frequencies.**

RTS Mini, the only 3 in 1 telemetry set in the world!

Dear fellow Falconers and Austringers,

I am proud to present you our combined
Radio - Telephone - Satellite transmitter, **working with all 430-434 Mhz receivers.**

It is he **RTS Mini**, a revolutionary Hi-Tech tracking system that is changing the telemetry landscape, it is a revolutionary **3 in 1** transmitter that has following features in one sole device:

1. Traditional Radio Transmitter available in UHF frequencies, SO IT WORKS WITH ALL UHF RECEIVERS.

2. Real-Time GPS Data directly on our receiver and on our App (Full Model).

3. Telephone inside the transmitter, order to be able to find back the bird **in case of loss of the radio signal**, sending a location sms to the user with a Google maps link to open on the navigator of the phone.

- **Solar panel option** with safety mode

Specs are:	Weight:	13,8 gr.
-------------------	----------------	-----------------

	Battery life:	6 days
--	----------------------	---------------

So it offers in one sole unit the best of the 3 existing technologies, nobody else does.

- Our **New real-time receiver** offers incredible real-time performance, as well as it links the transmitter with bluetooth to our real-time App for your phone or tablet (Android).

It receives **real-time GPS data** information like distance, direction, height, stoop and horizontal speed and links it to our user-friendly tactile screen or through bluetooth to our **phone app**.

If you just need to link at a **reasonable price** your real-time information to our App on your phone or tablet without buying a new receiver, you can use our **Micro Trainer**, which is a very small **Data link**.

A **hack model** with specific software also exist, with battery life up to 60 days without solar panel, and unlimited with solar panel.

Prices are following, those are ex VAT, and without transport cost:

Transmitter RTS Mini Radio-Phone- GPS, working in all UHF frequencies:	399 Euros
Transmitter RTS Mini Full, with real-time info through radio:	499 Euros
Complete set Real-Time Receiver with Radio, Real-Time information on tactile screen, Bluetooth for App + RTS Mini Full Transmitter:	1250 Euros
Micro Trainer Bluetooth Data Link:	350 Euros
Solar Panel option:	150 Euros
Warranty:	2 years
