

Quail & Quarry

Quail & Quarry is a family run farm business, specialising in the breeding and rearing of top-quality quail for the falconry sector.

We started out as a free-range hen egg farm, then produced quail eggs to supplement our hen eggs, before branching into rearing prime quail. We had no idea how big falconry was in the UK before this and we have met some amazing people and learnt plenty about it along the way!

We have developed our own bloodline of quail, which are a great food source for falcons. We have a large breeding flock producing fertile eggs every week, which are all incubated by ourselves and then all reared on our Somerset farm. Every quail we sell has been bred, hatched and reared by ourselves. We also test regularly for coccidiosis and rotavirus.

Our quail are reared in large pens to allow them the freedom to move around and develop fully.

So, for all your quail needs, please contact us...

WELCOME TO VOWLEY

With its proud heritage dating back into pre-history, falconry has long been the Sport of Kings. From the huge entourages of Ghengis Khan, to the courts of Frederick II, rulers have smoothed the paths of nationhood with gifts of falcons and shared hunting trips. Nowadays falconry finds ardent support throughout the Gulf and has been inscribed by UNESCO on the Representative List of the Intangible Cultural Heritage of Mankind.

No longer dependent on taking falcons from the wild, falconers now breed their own birds and this has led to the developments of different hybrids, breeds and bloodlines for hunting and racing. Flat racing to the lure or 'Telwah' has become a passion in the Middle East for the last decade or more. As Britain is one of the top countries for breeding high quality falcons it seems appropriate for us to host our own races especially for youngstock before they are shipped out to the Gulf for the start of the racing season in November.

We have developed Vowley on a 110-acre site specifically for falcon training and racing. It is managed by Charlie Hewitt-Dean and his wife Karen and has accommodation for visiting staff and falconers with a capacity of up to 90 falcons in training at any one time. We have a professional full length 400 metre Telwah course for Flat Racing with laser timing accurate to 1/1000s of a second. We also have two further training courses for the Telwah. Our course for Hunt Racing is 400 x 400 metres, again with additional training fields.

Vowley Pavilion

Photo credit – Adam Barnard

Some of the best racing and hunting falcons in the world will be going through their paces during the races at Vowley. Many are the property of Royal Families from Dubai, Abu Dhabi, Qatar, Saudi Arabia, Bahrain and Kuwait. You will see Peregrines, the big arctic Gyrfalcons, Sakers and hybrids between them, bred, trained and flown by professional falconers. During the Hunt Race falcons' stoop from 120 metres at speeds of 220 kph chasing the robotic prey in sizzling flights right over your head. This is the only place in Europe where you can see these top falcons appearing in public.

We hope you enjoy a sporting day out seeing these fantastic falcons.

Dr Nicholas Fox, OBE

The Falconry Heritage Trust

www.falconryheritage.org

FALCONRY HERITAGE TRUST

The Falconry Heritage Trust aims to establish a portal for the world's falconers and other interested parties to access aspects of the sports rich heritage by linking existing physical archives, including international private and public collections, through the medium of an electronic archive.

FHT hopes that whatever your background or interest in the sport, you may find something of value through the archive to deepen your knowledge, understanding and passion for falconry.

THE TEAMS

It is a team effort to produce a racing falcon. Although some of the Breeders are private individuals, some are owned by royal families who show a keen interest in the pedigrees and bloodlines. The Owner of each falcon may be a private individual, or a company, or a syndicate. Breeders produce anything from a handful of falcons each year, to several hundred. Most youngstock are shipped out to the Gulf in late summer ready for training. Some of the falcons racing at Wowley are available for purchase while some are cherished private birds.

Left to right: John Dickson, Kathryn Dickson, Anthony Rawlings, Kris Ulens
Photo credit – Adam Barnard

Once the young falcons are near fledging, they are handled by Falconers who teach them all the basic flying skills and fitness that they need for racing. The earliest young falcons are ready to race by late August. Pilots are needed for the Hunt Race and they must be experts at flying radio-controlled aircraft. They need good eyesight, fast reactions and nerves of steel. When a falcon is stooping at you at over 200 kph the ground comes up very fast. Many are wrung out after a good flight and need to sit down under a tree for a little while to recover!

While a Team can field falcons for several Owners, the Pilots, like jockeys, can only fly for one team. Some teams here today are fielding over a dozen top falcons and the competition is intense.

GENERAL RACING RULES

1. The Trainer is the person acting individually or leading a team of people who have trained one or more falcons together throughout the training period.
2. The Team is the Trainer and support crew who have trained one or more falcons together for a race on behalf of one or more Owners.
3. A Team cannot include two independent Trainers.
4. In the Flat Race the Falconer is the Team member luring and retrieving the falcon.
5. In the Hunt Race the Falconer is the Team member slipping and retrieving the falcon.
6. A Team can engage one or more Pilots but a Pilot cannot fly for more than one Team in any given race.
7. The Owner is the Owner of the Falcon at the start of the race.
8. An Owner can own more than one falcon and a falcon can have multiple owners.
9. The Owner of the falcon is the entity who wins the prizes.
10. The Breeder is the person or stud that hatched the Falcon.
11. The falcon must have a means of attaching a GPS tag supplied by the race management.
12. Each entry on the race card must include: The Falcon's name, ring or microchip number, species (including hybrids), gender, age, the Falconer's name, the Trainer's name, the Owner's name and the Breeder's name. A wild-caught Falcon shall be listed as 'wild-caught' under Breeder's name. For Hunt races, the Pilot's name must also be included.

13. Open Races are open to falcons only, of any species, gender or ages.
14. Novice Races are open to falcons not previously raced competitively.
15. The Contestants must provide their own insurance for any claims whatsoever against them.
16. The Organisers shall not be responsible for any injury or loss to any Falcon, howsoever caused.
17. The Falcon must carry a non-removable official registered ring or microchip identifying it as the individual described in its legal papers.
18. If offered for sale the Falcon must have any legal documents required to make the sale.
19. The Owners' Racing Colours may be displayed on hoods or the uniforms of participants. Pilots and Falconers may wear sponsorship liveries, logos or racing colours.
20. The Order of Flying will be declared one hour before the start of the competition drawn from a hat by the Timekeeper. Wherever possible no two falcons from one Team will be flown consecutively.
21. If the weather changes during the course of the competition, no allowance will be made to any competitor except that the Timekeeper may decide to temporarily halt the competition or cancel it altogether because conditions are unsafe, for example low fog, storm or heavy rain.
22. The wind strength at two metres must not exceed Force 5 i.e. 38km/hr, 24 miles/hour or 10.7 m/s and the temperature must not exceed 28°C.
23. The winner is the Falcon with the lowest time score.
24. The Timekeepers must have no declared interest in any of the competitors.

25. If the Falcon wanders off, the Timekeeper will decide whether or not to fly the next Falcon.
26. If a Lost Falcon is still not recovered, the Trainer of the next Falcon has the right to refuse to fly because of risk to his own Falcon. In this case his Falcon will be moved to the last position in the Flying Order.
27. All filming and media rights belong to the organisers of each event.

*Falcon competing in the Telwah Race at Vowley 2020.
Photo credit – Stuart Grimwood*

THE FLAT RACE

The Flat Race originated in the Middle East as an extension of training falcons in the desert. The Falconer is placed in the Starting Box and unhoods the falcon who sees a second falconer swinging a lure or *telwah* made of dried bird wings. As she leaves the starting box the falcon breaks the first beam and the clock starts. The Finish beam is set at either 300 metres or 400 metres and the falcon flies low and fast up the course, so close to the ground that she can use 'ground effect' to enhance her wing strokes. Competitors watch the clock closely.

The race is all about timing and only a few thousandths of a second make all the difference between winning and second place. Most of the falcons racing at Vowley are young birds, still developing and yet to reach their full potential, but they give buyers a good indication which ones to snap up and continue racing over the winter in the Gulf.

*Charlie Butler slipping a falcon in the Flat race at Vowley 2019.
Photo credit – Adam Barnard*

FLAT RACING RULES

These rules are in addition to the General Racing Rules

1. The Flat Races can include events for different ages or species of Falcon and for different classes of competitors.
2. The race distance is normally 400 metres along a smooth, level track.
3. The start and finish lines are infra-red or radar beam gates connected together to record timings to 0.001 seconds accuracy and screened at 0.01 seconds accuracy.
4. The Falcon must pass through both start and finish gates.
5. The start gate is 5 metres wide and the Falconer must stand no closer than 5 metres from the beam and no further than 20 metres from the beam.
6. The finish gate is no more than 30 metres wide and 30 metres high at the beam.
7. The Falconer can call the Falcon using only the lure (tilwah) and audible calls, and must stand behind the finish gate.
8. The dress of the Falconer can be any type specified by race Organisers.
9. On unhooding the Falcon, the Falconer must keep his hand static. Attempts to launch the Falcon from the hand will disqualify the entry.
10. A Falcon which fails to start after two minutes from being unhooded will be disqualified.
11. If a Falcon fails to complete the course within three minutes it will be disqualified.
12. If the Falcon wanders off, the Timekeeper will decide whether or not to fly the next Falcon.

JUNIOR FLAT RACE COMPETITION - UNDER 18'S

A flat race sprint over a reduced distance of 300 metres to the *telwah* or lure. The Junior event is intended to promote the sport of falconry to the next generation and as such the 'junior falconer/participant' will be expected to be able to handle the bird with a reasonable level of confidence.

A Falconer is placed in the Starting Gate and unhoods the falcon who sees the second falconer (in this instance, the junior falconer) swinging a lure or *telwah* made of dried bird wings. As she leaves the starting gate the falcon breaks the first beam and the clock starts.

The junior participant is required to call the falcon the distance from the starting gate to the lure or *telwah*, retrieve them from the lure to the fist, and secure the bird safely before leaving the course.

The following **penalties** will be added to the participant final time:

To clarify, a participant with a falcon that achieved an 18 second time who required outside verbal assistance to complete the task of collecting and securing the falcon from the lure would have 2 seconds added so have a total time of 20 seconds.

The **winner** will be the participant with the lowest total time including any penalties.

| | | |
|------------------------------|---------------------------------------------------------------------------|----------|
| Outside verbal assistance | A verbal instruction is given to the participant from another team member | 2 second |
| Outside physical assistance | The participant requires the assistance of someone to complete the task | 4 second |
| Failure to secure the falcon | The participant fails to make the bird safe once recovered to the fist | 1 second |

FLAT RACE TIMING

AYAMA are the timing partner for the Flat Races for the 2021 season.

AYAMA has been making Telemetry systems for 45 years. In 1993 **AYAMA** launched its specialist telemetry for Falconry and Pigeon Racing in Spain and Europe. For the last 37 years **AYAMA** has been improving, developing and advancing falconry telemetry, to where we are today with GPS and the soon to be released, Micro GPS.

AYAMA offer Telemetry products across several platforms including Wildlife Tracking and Working Dogs. The **AYAMA POINTER and AYAMA POINTER TRACK (GPS)** handsets are small, lightweight, touch screen and wearable, so no need to leave it behind in the car. You can attach it to your belt, falconry vest or simply put it in your pocket. The collapsible Yagi antenna makes this unit very compact, extremely accurate, and with its colour touch screen, it makes it so simple and easy to use.

The **AYAMA POINTER TRACK (GPS)** handset shows the maps live on the screen, and also incorporates traditional radio tracking, so there is no need for a separate radio telemetry system, as it is all built in to one small unit.

AYAMA has a wide range of transmitters suitable for every requirement, some that last 60+ Days, through to their smallest transmitter that weighs just 2.3gms and is 4 inches long and at the pinnacle is the incredible **SAHARA GPS** Transmitter. The **AYAMA** transmitters are extremely versatile and all offer Leg or Spring Clip mounting.

AYAMA successfully sponsors many Sky Trial Events in Europe and are extremely pleased to be sponsoring the inaugural Falcon Races in the UK as the official timing partner.

PRIVATE HIRE

The Pavilion is available to hire for private functions

THE HUNT RACE

The Hunt Race is designed to test the hunting skills of pursuit falcons. Many of the contestants are actual hunting birds, and some are young ones learning their flying skills before being taken hunting. The chase relies on robotic prey flown by skilled pilots controlling them from the ground. The prey is specialist designed by Wingbeat Ltd for falcons.

The Falconer and Pilot stand inside the 100 x 100 metre Landing Square facing the wind for a quick take off. On the first horn the Pilot launches the Roprey and the Falconer hoods off his falcon which is carrying an altimeter.

The Pilot must tempt the falcon to chase it high into the sky as quickly as possible and the falcon must have an impressive climb rate. When the falcon reaches 120 metres high (400 feet) the second horn is sounded and the Pilot dives immediately closely followed by the falcon in a vertical stoop. As they reach only 50 metres above the ground the third horn is sounded and the Pilot pulls out, putting huge G forces onto the model and the falcon. Both are now close to the ground and the falcon is hot onto her prey. But the Pilot must evade her attacks for thirty seconds without getting caught. If he succeeds, the fourth horn sounds and the falcon must quickly catch her prey in the air and come down inside the Landing Square. As they touch down the fifth horn sounds and the clock is stopped.

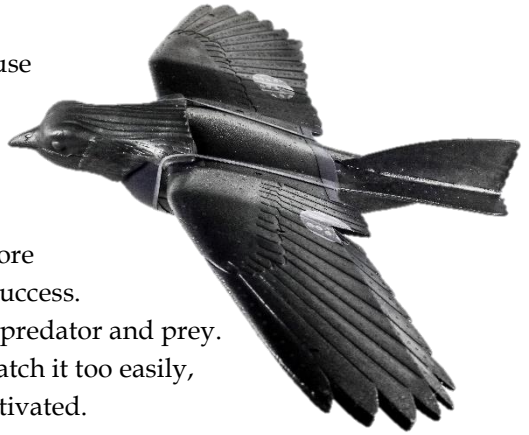

The Hunt Race is designed to be a sporting contest. Things can and do go wrong. There is no guarantee that the best falcon will win on the day. She may be

clocking a winning time and then, at the last moment, come down outside the Landing Square and incur time penalties.

THE ROPREY

The Hunt Race is only possible due to modern developments in materials technology. The Roprey were designed by Wingbeat Head Designer Remy Van Wijk and Dr Nick Fox, and trialled over six years by the Northumberland Crow Falcons.

For Hunt Racing, contestants must all use the same factory fuselage and wings but are permitted to make any other changes they'd like, and this can aid overall product development for everyone. However, simply fitting a more powerful motor by no means ensures success. There has to be a fine balance between predator and prey. If the prey is too weak the falcon will catch it too easily, but if it is too strong, she may be demotivated.

Contrary to popular conception, these falcons are not starved. They are fed to full athletic muscle development and are completely free high in the sky. They could fly 400 km in a day and end up in Denmark by evening if they wanted to! But their instinct to chase is strong and they 'lock on' to their prey and seldom take their eyes off it. The prey must be robust and flexible enough to withstand multiple catches and falls from the sky, yet at the same time not be so hard that the falcon could be injured. The wings and body are made from resilient expanded polypropylene and the electric ducted fan motor is hidden in a jet tube deep inside the body where the fan blades cannot contact the falcon. If parts are broken, they are usually repaired easily, or if not, they are replaced. The head and neck are made of soft foam and, on landing, the falcon will 'kill' her prey by biting its neck. Sometimes a titbit of meat is placed there but for experienced falcons this is unnecessary; they will give chase regardless.

Although developed initially for training falcons, these robotic birds can be designed as many species, such as duck or crows. They can even become

Peregrines or Goshawks and used to humanely chase seagulls away from airfields and landfill sites.

HUNT RACING RULES

These rules are in addition to the General Racing Rules and apply to the Hunt Races

1. Any qualifying Falcon may be entered into 'Open classes'.
'Restricted classes' limit entries to Falcons of a specified class.
2. The feet of the Falcon must be in natural hunting condition, that is to say, with sharp claws and fully functional toes. Fitting beads to the claws or any device or surgery that prevents the falcon from having full use of its feet will disqualify the Falcon.
3. The Pilot is on the same side as the Falcon and can be an in-house Pilot or a freelance Pilot, the same as jockeys in a horse race.
4. A 'Team' at minimum consists of the Falconer who slips the Falcon and the Pilot. It may also include the Owner or Owners and the Trainer, if different.
5. An Owner can have Falcons in more than one Team.
6. The Falconer, Pilot and Trainer can act only in one Team during a given Race.
7. The number of Falcons entered by one Owner in a race may be restricted by the Organisers.
8. The Pilot can fly for more than one Falcon in the same Team.
9. The Pilot can fly for more than one Team in Qualifying races, but is restricted to one team in Finals.

10. The Roprey is supplied by the Pilot or the Trainer, not by the competition Organisers. The wings, fuselage and tail of the model must be unmodified factory models supplied by Wingbeat. The motors, electronic controls, batteries, heads and airbrake springs can be modified from factory issue. The transmitter can be any model. Any feathers added to the model must be non-detachable and must not extend more than 5 cm beyond the end of the tail. No modification will be allowed if, in the opinion of the judges, the model risks injury to the Falcon or spectators.
11. All models must have properly padded heads to prevent injury to the Falcon or spectators.
12. The models may carry any amount of logos.
13. In the event that the model malfunctions for any reason, this is the fault of the competitor, not the Organiser.
14. While a race is in progress no person may distract the Falcon in any way, including showing a lure or roprey, or feeding a falcon, within 100 metres of the Landing Square. If a competitor files a formal complaint of distraction, and it is upheld by the Timekeeper, the competitor will be allowed a re-run and the distractor, if a member of a competing team, will have his or her Falcons disqualified.
15. If the Falcon wanders off and the Pilot runs out of battery and is forced to land, the Falcon is declared 'Lost' and is disqualified. The Timekeeper will then consult the GPS location of the Falcon and decide whether or not to fly the next Falcon.
16. In the event of any cheating, irregularity or uncertainty the Timekeeper's decision will be final.

17. The standard Landing Square is 100 x 100 metres marked out by corner posts and white tape 30 cm above ground level so that the falcon cannot go underneath it. Outside the tape is a 5 metre wide clear zone separating the tape from the crowd barrier. This zone must be kept completely clear at all times.
18. The Falcon must be fitted with a standardised GPS tag with a barometric altimeter transmitting the height reading down to the Timekeeper in real time. This tag is supplied by the race Organisers.
19. The classes will be 120, 200, 300, 400 and 500 metres altitude for the top height.
20. The model can be any colour but only one size in each class. So, the 120, 200, 300 and 400 metre competitions will usually be the standard V2 size model, and the 400 and 500 metre classes will usually be the larger V1 Robara model.
21. The model can include an altimeter allowing the Pilot to know the height of the model.
22. Only the Falconer, the Pilot and the Timekeeper are allowed inside the Landing Square.
23. The competition starts with the Falconer and the Pilot standing inside the Landing Square facing the wind. They can be any distance apart.
24. The Pilot can be in any position in relation to the Falcon as long as both are within the Landing Square.
25. The braces on the Falcon's hood can be open but the hood must be on, with the Falconer's free hand at his side. When the Falconer and the Pilot are ready to slip, they must both raise their hands to signal to the Time keeper.

26. Once both hands have been raised, the Timekeeper sounds the start horn and the clock starts. The Pilot launches the Roprey and the Falcon is unhooded.
27. In the event that the Pilot has a mis-launch, one more attempt is permitted provided that the Falcon has not left the Falconer's fist. Once the Falcon is in the air the flight is underway and cannot be repeated. In the event of a mis-launch, the clock continues running from the initial horn time.
28. The Pilot can do anything he likes to encourage the Falcon to reach the top height as quickly as possible and use any part of the sky, including outside the Landing Square.
29. When the Falcon reaches the top height, the Timekeeper sounds the second horn.
30. The Pilot must then immediately dive to encourage the Falcon back down as fast as possible. When the Falcon has descended past 50 metres altitude the Timekeeper sounds the third horn.
31. At this point there is a break of 30 seconds during which time the Roprey can do anything it likes but must not get caught. The reason for this is to reduce the risk of the Falcon being injured by hitting the Roprey in a hard stoop, and to provide spectators with the excitement of an aerial combat at close quarters, demonstrating the flying skills of the Falcon.
32. After 30 seconds the Timekeeper sounds the fourth horn and continues the time clock. The Falcon must catch the Roprey in the air in the shortest time possible after the fourth bell. The fifth horn sounds at the moment the Falcon touches the ground holding the Roprey. This is the Finish.
33. The winner is the Falcon with the shortest total time between the first (start) horn and the fifth (finish) horn. The logged time includes the mandatory 30 second chase between the third and fourth horns.

34. If at any time the falcon touches the prey but does not bind to it, the hunt can continue.
35. If the falcon catches the prey and lands on the ground with it before the third horn, the falcon is disqualified.
36. If the falcon catches the prey between the third and fourth horns and lands with it before the fourth horn it incurs time points equivalent to the number of dogfight seconds remaining, times ten.
37. All parts of the model must be clear of the ground at the moment that the Falcon catches it.
38. The Pilot may use the airbrake, or reverse thrust, but nothing external to the model, such as a parachute.
39. If the Roprey hits the ground without the Falcon having touched it, the Falcon is disqualified.
40. If the Falcon hits the Roprey to the ground but does not bind to it, the clock continues until the Falcon has landed on the Roprey on the ground.
41. The decision as to whether or not the Falcon is holding the Roprey on landing is made by the Timekeeper who may consult action replay footage.
42. If the Falcon carries the Roprey and lands outside the Landing Square, the Falcon incurs 30 seconds time faults.
43. If the landing of the Falcon with the Roprey on the ground outside the Landing Square cannot be seen by the Timekeeper the landing time shall be determined from the GPS recording.

HUNT RACE TIMING

Marshall Radio Telemetry are the timing partner for the Hunt Racing for the 2021 season.

Marshall designs and supplies premium GPS long-range tracking and recovery equipment to hunters, parrot free fliers, rocketry, and competitors around the world. Choose **Marshall** falconry transmitters, dog tracking collars and direction-finding receivers and you'll have the most carefully engineered and reliable tracking system available.

Quality in telemetry to **Marshall** means three things: reliability, range, and ease of use. Each of these is important in getting your bird back after the hunt. Your birds are valuable not just in terms of money but also in terms of the time spent training and the emotional investment you have in them. **Marshall** understands that when your bird is lost, suddenly nothing but the best is acceptable.

Marshall Radio Telemetry builds its transmitters and receivers to the highest technical standards and tests them in the most demanding conditions. They are confident enough that they back them up with a three-year warranty!

You can have confidence that the Marshall system is the best, most carefully designed and engineered tracking system you'll find anywhere.

Ring No: 207 DICKSON21 X

Team Name: **NBC Environment**

Owner: NBC Environment

Falconer:

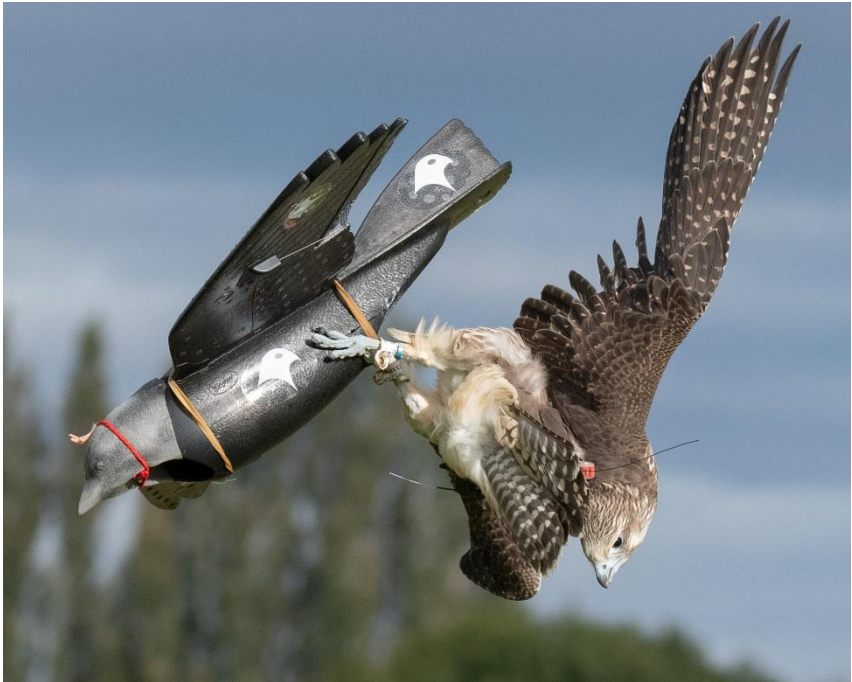

Trainer: John Dickson

Breeder: Dickson Falcons

Race Category: Novice

At Wingbeat, we believe that one of the most beautiful things falconry can offer is the pursuit flight. The contest for aerial supremacy, which can play out in so many ways, is the perfect demonstration of the predator/prey relationship. These flights demonstrate so much of the falcon's potential and allows the falconer, now merely a spectator, to experience ringing flights, dramatic stoops and rapid low-level tail chases.
